CLAIMS 0610 #7

What I claim as my invention is a universally compatible, electrical troubleshooting and testing apparatus, designed for usage within the Heating Ventilating and Air Conditioning industry.

I have titled my invention, THERMOMOSTATIC CONTROLLER AND CIRCUIT TESTER. This is a multifunction apparatus with four main functions.

The functions are -:

1. THERMOSTAT CONTROLLER or OVERRIDER which lessens commutation between the Air Conditioning system's components, especially in awkward locations.
2. CONTINUITY TESTER
3. VOLTAGE TESTER
4. FLASHLIGHT

Categories 2,3 and 4 now replaces the existing traditional tools from the Technicians Tool Kit.

The apparatus has successfully been subjected to high standards of operational and safety tests and conformities were met and complied with.

I also claim to be the sole inventor of this device, which is novel and original.

According to my knowledge, this invention does not constitute an infringement of any or similar copyrights.
